

## Door Handle Vibration Security Alarm (2 Pack)

### Introduction

The SecurityMan door handle vibration alarm scares off unwanted intruders that tamper with your door. Ideal aid for caregivers that need to monitor the wearabout of children and elderly. Simply hang the alarm on the inside of the door knob. The VIBRATIONALARM detects vibration that occurs when someone touches the handle from the outside which triggers an ear piercing alarm sound of 130dB.

### Features:

- Extremely loud 130dB siren
- 4 sensitivity levels so you can make adjustments in windy areas
- Works on any type of doorknobs, including metal, French, standard, and plastic doorknobs
- 2 alarm modes (30 sec and continuous)
- Simple to arm and disarm
- Batteries included

### Package Contents

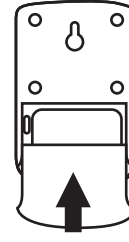

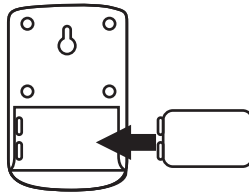

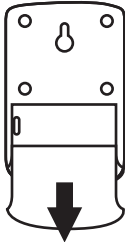

- 2x Vibration alarms with lanyard
- 2x 9V Batteries
- Mounting dry wall screws
- User's guide

### Specifications

- Alarm time: 4 hours (continuous)
- Alarm mode: 30 seconds (default) or continuous
- Delay arm: 5 seconds
- Power: 9Volt battery
- Decibel:130dB
- Alarm power: 0.6W
- Standby current: 9uAh
- Product size:90\*56\*28mm
- Weight: net .75lb / gross 1.3lbs

### Setup and Operation

Remove the battery cover, insert the 9V battery and reattach the battery cover. To prevent damage to the alarm please make sure you properly align the polarities (+/-). Once the batteries are installed, hang the unit over the door handle and flip the switch to the ON position to arm.

#### Arming

To arm the unit, simply move the on/off switch to the ON position. After moving the switch to the on position there is a 5 second delay time to arm which will allow you to make changes to the alarm settings (sensitivity level and alarm duration). After the 5 second delay time you will hear a single "beep" indicating that the unit is armed and any vibration afterwards will trip the siren.

#### Disarming and stopping the siren

Once the alarm is tripped you can press the SET button to stop the siren and keep it armed or move the on/off switch to the OFF position to turn it off. Please keep in mind that pressing the SET button is kind of like a restart button. It will stop the siren; start the 5 second delay to arm and then arm itself again.

- Off = Turns the unit off
- Set = Stops the siren and keeps the unit armed

#### Changing the alarm time duration

The unit is set to use the 30 second alarm duration every time the unit is turned on by default. To switch it to a continuous "non-stop" duration, simply press and hold the SET button until you hear 2 beeps.

When set to the default 30 second alarm duration, the alarm will sound off for 30 seconds then silence itself and repeat the 30 second alarm duration every time vibration is detected.

When set to continuous, the alarm will sound off until the SET button is pressed to silence the alarm and presume armed or until the battery dies (approx. 4 hours).

#### Changing the sensitivity level

The unit is set to use the highest sensitivity every time the unit is turned on by default. To change the sensitivity simply press and release the SET button until you reached the desired level.

- 1 beep: Max (default every time the unit is turned on)
- 2 beeps: High
- 3 beeps: Medium
- 4 beeps: Low

#### Warranty:

SecurityMan warrants that this product will be free from defects in materials and workmanship for one year or otherwise specified on the product packaging. This limited warranty shall commence from the date of purchase. SecurityMan Products warranty is not transferable and is limited to the original purchaser. If the product is found to be defective then, as your sole remedy and as the manufacturer's only obligation, SecurityMan will repair or replace the product. This warranty shall not apply to products that have been subjected to abuse, misuse, abnormal electrical or environmental conditions, normal wear and tear or any condition other than what can be considered normal use.
